

Kirisun PT7000 VHF/UHF Portable Radio

[Functions](#) [Specifications](#) [Accessories](#) [Download Brochure](#) [Download Software](#)

- **DTMF Encoder:**
Programmable DTMF settings could be used for dispatch operations and remote control applications.
- **16 channels with scan:**
16 communication channels provide flexible channel assignment among different user groups.
- **Emergency Alarm:**
The radio can be programmed to alarm local or secretly, to alarm with sending emergency code and alert or background sound for different emergency situations.
- **Lone Work:**
The radio enters emergency mode if the user does not respond to a warning call (Lone Work) or a inquire code.
- **Channel Scan:**
The radio could continuously scan each channel in the scan list for active conversation. Simply press a preset key to activate scan. Priority scan and talk channel (revert channel) can be set.
- **Busy Channel Lockout (BCLO):**
BCLO is used to prevent interference with on-going conversations. If BCLO is on, the radio will be remain in receiving status even with PTT pressed to avoid interfering with other conversation.
